Your Partner - KME

The Expert in Seawater Piping

Hundred years of experience, a thorough understanding of the different industries' specific problems, a potent range of application-oriented products and services, plus qualified technical advice and assistance, have been the bedrock of KME's relations with its customers.

Marine Applications

KME's division Marine Applications specializes in the production and supply of copper-nickel alloys for seawater piping system. Since decades, these alloys have successfully used in:

- Merchant and military shipbuilding
- Offshore oil and gas installations
- Coastal petroleum and petrochemical processing plants
- Seawater desalination plants
- Coastal electricity generation plants

Copper-nickel alloys are widely applied in:

- Seawater cooling systems
- Fire water systems
- Sanitary systems
- Deck steam pipes
- Deluge systems
- Hydraulic and pneumatic systems
- Seawater feed lines to desalination and processing units
- Splash zone sheathing

The Material

KME OSNA®10-Alloy

The chemical composition of the KME's OSNA®10-alloy is modified to ensure the compliance with all international specifications. Controlled content of alloying elements and minimised concentration of impurities ensure reliable service and fabrication properties of the alloy.

Main Advantages of OSNA®10-Alloy

Despite the rough conditions in marine service and the highly corrosive nature of seawater, the products provide well balanced combination of technical and economical advantages:

- Simple alloying system with good weldability
- Excellent ductility and toughness
- Outstanding erosion corrosion performance
- Resistant to uniform and localised corrosion
- No effect of ambient seawater temperatures
- No effect of seawater chlorination
- Resistant to biofouling
- Resistant to stress-corrosion cracking
- Low maintenance costs
- A lot of design experience

Offshore Product Range

The OSNA®10 offshore product range is based on:

- EEMUA -144: 1987 Tubes¹ Seamless and Welded
- EEMUA -145: 1987 Flanges Composite and Solid
- EEMUA -146: 1987 Fittings

The unique dimensional range from ½ inch to 36 inch ensures the supply of the entire piping systems from one source. Although the pipe dimensions of 38 and 40 inch are not included in the EEMUA 144 – 1987 they are available here as they are commonly specified in offshore projects. Based on ASME specifications, additional components are included.

¹ The reference „pipe“ rather than „tube“ is used in this document.

Design Scope

Working pressures and temperatures of components included in this specification:

- 1. 16 bar/232 psi: -29°C/-20°F to +75°C/+167°F
- 2. 20 bar/290 psi: -29°C/-20°F to +38°C/+100°F

Pipes Seamless and Welded:

- Pipes are based on BS MA 60, DIN 86007, and ANSI/ASME B31.3
- The wall thicknesses comply with ANSI B31.3 and DIN 86007 as well as International Association of Classification Societies with additional allowances for robustness to withstand mechanical damage, especially in the smaller sizes.
- The fit-for-purpose corrosion allowance of 0.5 mm sufficient for entire service life of the piping installation has been included. This corrosion allowance is in accordance with all major classification societies specified for alloys containing ≥ 10 wt. % Ni and ≥ 1.5 wt. % Fe. Mechanical properties of pipes are given in Appendix A.

Flanges Composite and Solid:

- Included series of composite (lap type) and solid flanges in metric dimensions based on ANSI B16.5, MSS SP-44 and BS 1560
- The basic metric dimensions for drilling and flange outside diameters are those given in ANSI B16.5 and MSS SP 44 Class 150 rating with inch size bolting.
- The copper-nickel stub end and flange joint faces are machine finished and comply with the corresponding Sections of EEMUA 145 and are summarized in the Appendix A.
- Mechanical properties pressure/temperature ratings of flanges are given in Appendix A.

Fittings:

- The specification comprises a series for pipe fittings including butt weld, socket welding, capillary brazing, threaded, self-reinforced fittings as well as saddle pieces.
- The “building in” dimensions of the butt welding fittings are based on ANSI B16.9 apart from the caps that are based on DIN 28011 (with suitable amendments).
- Mechanical properties pressure/temperature ratings of fittings are given in Appendix A.

Physical Properties of CuNi 90/10

The physical properties of the alloy are given by Appendix B. The basic allowable stresses in tension are in accordance with ASME B31.3 Table A-1.

Welding

The welding consumables used for the manufacturing of welded components are in accordance with AWS-A5.7 Class ER CuNi. The welding procedure specification and welder qualification are in accordance with ASME code, section IX.

Testing of Welds

The weld seams are examined by the liquid dye penetrant testing in accordance with ASME code, section VIII, division 1, appendix 8. The radiographic examination is performed for the complete length of each weld to meet the requirements of ASME code, section VIII, UW51.

Gaskets

The gaskets normally used with flanges are those made from aramid fibre with nitrile binder in accordance with ASME B16.21 or equivalent. The gasket hardness shall not be less than 75 Shore. The gaskets shall not be graphited. In order to ensure adequate seating when solid weldneck and solid slip-on flanges are used, irrespective of gasket materials, the gaskets shall be located within the bolt circle. Note: Gaskets should not be used when mating with elastomer/rubber faced flanges.

Suggested Branch Connections

Suggested branch connections are provided by Appendix D.

PDMS Data

The components mentioned in this catalogue are available in the PDMS-format. Please contact us for more information.

KME Quality-Management

Quality is the very basis of reliability – quality in every detail, in every step of work.

For decades now, KME has been consistently putting into action the corporate idea of quality, and, with it, gained the reputation of being a reliable supplier throughout the world. The fulfilment of our customers expectations as to KME products and services in all respects is the declared corporate policy. To assure this, KME Quality Management System has been set up, implemented and certified to DIN EN ISO 9001 by *Lloyd's Register Quality Assurance* at all KME locations.

KME Quality Management System comprehends process-integrated quality controls, internal product and system audits, the systematical training of all employees and the operating of computer aided statistical methods.

The results of KME production give convincing proof: our results have been surpassing the requirements of national and international standards for years.

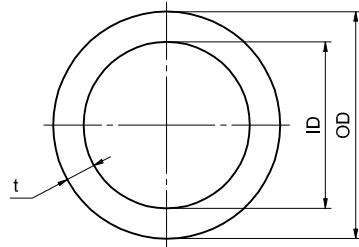

KME produces quality.

Pipes

Seamless Pipes

Seamless pipes are in accordance with EEMUA-144, Section 1. They are manufactured from hot extruded shells followed by cold work and annealing.

Welded Pipes

Longitudinally welded pipes are in accordance with EEMUA-144, Section 2. They are manufactured from hot rolled or cold rolled and annealed sheet or plates in accordance with BS 2870, BS 2875, ASTM B171 or ASTM B402. Mechanical testing is carried out in accordance with the standards above. The pipes are supplied in "as welded" condition.

Dimensions

Dimensions are based on EEMUA -144, Tables 1.2.1-1.2.2 and 2.2.1-2.2.2. However, the pipe diameters range from $\frac{1}{2}$ in./16 mm to 36 in./914 mm. Although the pipe dimensions of 38 in./965 mm and 40 in./1016 mm are not included in the EEMUA 144 - 1987 they are available on request as they are commonly specified. The corresponding wall thicknesses of the pipes comply with the pressure containment requirements of ASME B31.3 as well as the requirements of the International Association of Classification Societies. Pipes with other wall thicknesses are available on request.

Tolerances

See notes 1-4 for seamless and notes 2-4 for welded pipes.

Weld Preparation

For wall thickness less than 3 mm, the pipes are supplied with plain weld ends. Larger thicknesses are supplied with the weld bevel of $37\frac{1}{2}^\circ \pm 2\frac{1}{2}^\circ$.

Dimensions (mm)

Seamless Pipe

| Size Nominal (in) | Size Specified (mm) | Specified Wall Thickness (mm) t | | Theoretical Weight/Metre (kg) | |
|----------------------|------------------------|---------------------------------|--------|-------------------------------|--------|

| 16 | 419 | 7.0 | 9.0 | 80.75 | 103.32 |

Seam-Welded Pipe

| Size Nominal (in) | Size Specified (mm) | Specified Wall Thickness (mm) t | | Theoretical Weight/Metre (kg) | |
|----------------------|------------------------|---------------------------------|--------|-------------------------------|--------|
| | | 16 bar | 20 bar | 16 bar | 20 bar |
| 16 | 419 | | 9.0 | | 103.32 |
| 18 | 457.2 | 8.0 | 9.5 | 100.62 | 119.10 |
| 20 | 508 | 8.5 | 11.0 | 118.90 | 153.10 |
| 24 | 610 | 10.5 | 13.0 | 176.30 | 217.30 |
| 28 | 711 | 12.0 | 15.0 | 234.90 | 292.21 |
| 32 | 813 | 13.5 | 17.0 | 302.20 | 378.76 |
| 36 | 914 | 15.5 | 19.0 | 390.00 | 475.97 |

Note 1

The pipe sizes up to including 4 in./108 mm are based on BS 2871: Part 2: Table 3 for outside diameters and their tolerances to allow for the use of capillary and compression fittings and brazed (and welded) slip-on flanges. The wall thickness of the 16 bar range have been increased to match the 20 bar range for mechanical strength.

Note 2

The pipe size 6 in./159 mm up to 16 in./419 mm are also based on BS 2871: Part 2: Table 3 for specified diameters but the tolerance have been applied to the inside diameters for facilitate alignment of matching weld preparations.

Note 3

The ovality of the finished pipe doesn't exceed 2% of the difference of the maximum and minimum diameter measured on the same cross section.

Note 4

Up to including 4 in./108 mm, the wall thickness doesn't vary by more than 10 % specified therein. For diameters from 6in./159 mm and larger, the wall thickness is not less than 12.5 % of the specified value.

The pipes with other dimensions than mentioned herein are available on request. Please contact us for more information.

Stock Dimensions

All seamless pipes are available from stock.

Elbows

Type and Construction

Elbows are in accordance with EEMUA-146, Section 1. Seamless elbows are typically available up to 18 inch/457 mm. Larger dimensions are manufactured from longitudinally welded half shells. 45° and 90° elbows are available in all sizes.

Dimensions

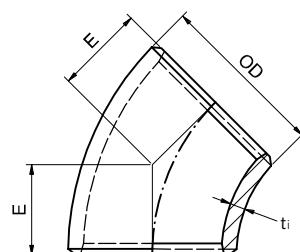

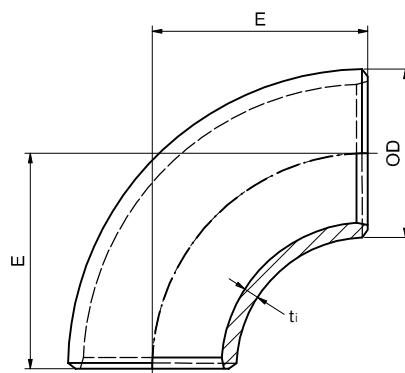

Dimensions are based on EEMUA-146, Section 1, Figure 1.1, Tables 1.1-1.2 and 1.4-1.5., Standard elbows are supplied with long radius, i.e. 1.5 x O.D. Elbows with other dimensions are available on request.

Tolerances

See Appendix C

Weld Preparation

For wall thickness less than 3 mm, the elbows are supplied with plain weld ends. Larger thicknesses are supplied with the weld bevel of $37\frac{1}{2}^\circ \pm 2\frac{1}{2}^\circ$.

Caps

Type and Construction

End caps are in accordance with EEMUA -146, Section 1 and seamless.

Dimensions

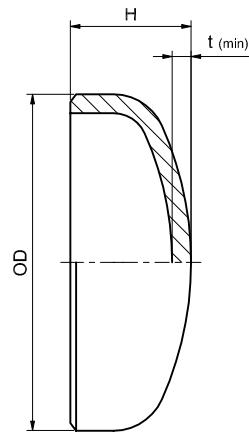

Dimensions are based on EEMUA -146, Section 1, Figure 1.1, Tables 1.1-1.2 and 1.8. The additional wall compensatory thicknesses over and above the minimum pipe wall thicknesses are included. Caps with other dimensions are available on request.

Tolerances

See Appendix C

Weld Preparation

For wall thickness less than 3 mm, the caps are supplied with plain weld ends. Larger thicknesses are supplied with the weld bevel of $37\frac{1}{2}^\circ \pm 2\frac{1}{2}^\circ$.

Reducers

Type and Construction

Eccentric and concentric reducers are in accordance with EEMUA -146, Section 1. The concentric reducers are typically supplied up to incl. 12 in./323.9 mm in seamless condition; bigger dimensions are seamwelded. The eccentric reducers are supplied up to incl. 8 in./219.1 mm in seamless condition; bigger dimensions are seamwelded.

Dimensions

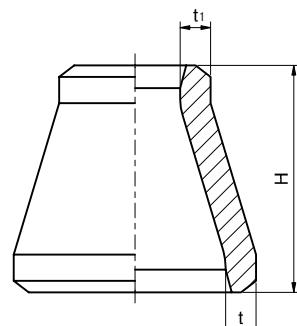

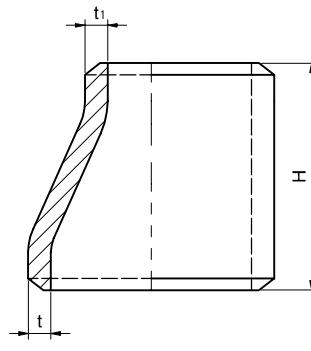

Dimensions are based on EEMUA -146, Section 1, Figures 1.1, Tables 1.1-1.2 and 1.9.1-1.9.3. Reducers with other dimensions are available on request.

Tolerances

See Appendix C

Weld Preparation

For wall thickness less than 3 mm, the reducers are supplied with plain weld ends. Larger thicknesses are supplied with the weld bevel of $37\frac{1}{2}^\circ \pm 2\frac{1}{2}^\circ$.

Saddle Pieces

Type and Construction

Saddle pieces are in accordance with EEMUA -146, Section 7. Saddle pieces up to including 12 in./323.9 mm are supplied in seamless. Larger dimensions are manufactured from seamless or welded pipes as well as plates.

Dimensions

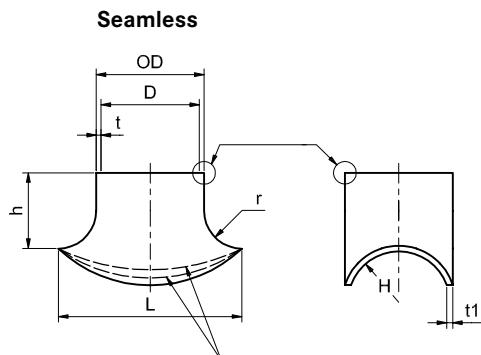

Dimensions are based on EEMUA -146, Section 7, Figures 7.1-7.3 and Tables 7.1.1-7.3.2. Saddle pieces with other dimensions are available on request.

Tolerances

The tolerances are based on EEMUA - 146, Section 7, Tables 7.2.1-7.3.2.

Weld Preparation

Welding ends of butt weld ends for wall thickness less than 3 mm, the saddle pieces are supplied with plain weld ends. Larger thicknesses are supplied with the weld bevel of $37\frac{1}{2}^{\circ}\pm2\frac{1}{2}^{\circ}$.

Seamless saddle pieces

Welding Outlets

Self Reinforced Branch Connector - Butt Welding Type

Type and Construction

Welding outlets are in accordance with EEMUA-146, Section 6. The components are manufactured by hot forging and machining from extruded bars (solid or hollow).

Dimensions

The dimensions and tolerances are suitable for welding to seamless and seam-welded pipes to EEMUA - 144. The branch size covered is from $\frac{1}{2}$ in./ 16 mm to 16 in./419 mm. Other branch sizes are available on request. The welding outlets covered are suitable for application to header sizes from $\frac{1}{2}$ in./16 mm to 38 in./965 mm. The sizes of the header pipes for a given branch size are consolidated in accordance with MSS SP-97, Section 3.3 and Figure 1, whereas the gap distance between the header pipe radius and the fitting inlet radius doesn't exceed $\frac{1}{16}$ in./1.6 mm.

The design of the self reinforced connection is in accordance with ASME B31.3 Section 304.3 suitable for both 16 and 20 bar pressure ratings. The additional design feature is the smooth entry into the connection to reduce the turbulences.

The overall dimensions are based on EEMUA -146, Section 6, Table 6.1.

Welding Outlets

Composite Weld Neck Flanges: Weld Neck Stub Ends and Backing Flanges

Type and Construction

The weld neck stub ends are in accordance with EEMUA 145, Section 1A for 16 and 20 bar systems. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 36 in./914 mm. Other sizes are available on request. The stub ends are subdivided in two types short (Type S) based on DIN 86037 and long (Type L) based on MSS SP-43 suit the appropriate pipe dimension. The Type L stub ends are included to facilitate the attachments of this type of flange to butt weld welding fittings in accordance with EEMUA-146.

Dimensions

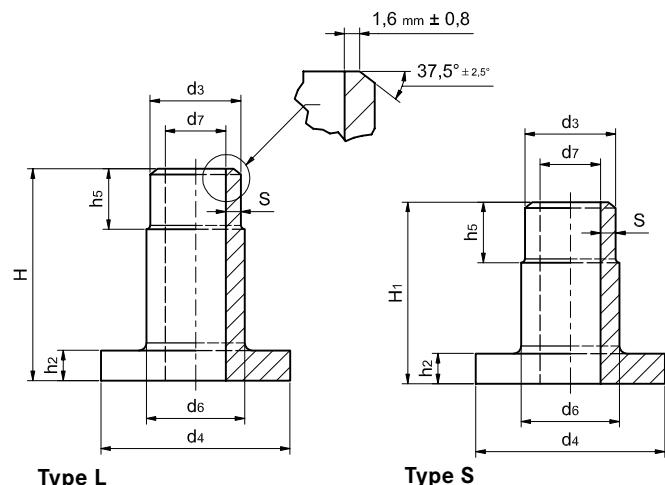

Dimensions are based on EEMUA-145, Section 1A, Tables 1.2-1.3.

Tolerances

The tolerances are based on EEMUA-145, Section 1A, Table 1.5.1.

Weld Preparation

The stub ends with $S_1 < 3\text{mm}$ are supplied with plain weld ends. Larger dimension are supplied with the weld bevel of $37 \frac{1}{2}^\circ \pm 2 \frac{1}{2}^\circ$.

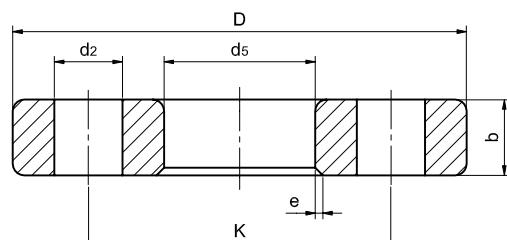

Weld preparation applicable to $S_1 \geq 3,0\text{ mm}$

Composite Weld Neck Flanges: Weld Neck Stub Ends and Backing Flanges

Type and Construction

The weld neck backing flanges are in accordance with EEMUA 145, Section 1B and are suitable for both 16 and 20 bar pressure rating. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 36 in./914 mm Class 150. Other sizes are available on request. Drilling and outside diameter dimensions of flange sizes $\frac{1}{2}$ in./16 mm-24 in./610 mm are in accordance with ANSI B16.5 and BS 1560, whereas the larger sizes, 28 in./711 mm -36 in./914 mm are in accordance with MSS SP-44.

The backing flanges are manufactured from forged carbon steel in accordance with ASTM A105. The chemical composition and mechanical properties of the components are in accordance with EEMUA 145, Section 1B, Table 1.6.2. The recommended bolting is in accordance with ASTM A193-B7. Unless otherwise specified the flanges are protected by hot dipped galvanising. Additional organic coatings such as polyamide epoxy are available on request.

Dimensions

Dimensions are based on EEMUA -145, Section 1B, Table 1.4.

Tolerances

The tolerances are based on EEMUA - 145, Section 1B, Table 1.5.2.

| Nominal Size in | b mm | D mm | min. mm | d ₂ in | d ₅ mm | K mm | No. of Bolts | e mm |

Composite Slip-On Flanges: Slip-On Stub Ends and Slip-On Backing Flanges

Type and Construction

The slip-on stub ends are in accordance with EEMUA 145, Section 2A and are suitable for 16 and 20 pressure rating. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 4 in./108 mm Class 150. The slip-on backing flanges are in accordance with EEMUA 145, Section 2B. Drilling and outside diameter dimensions are in accordance with ANSI B16.5 and BS 1560. The backing flanges are suitable for use in both 16 and 20 bar systems.

The backing flanges are manufactured from forged carbon steel in accordance with ASTM A105. The chemical composition and mechanical properties of the components are in accordance with EEMUA 145, Section 2B, Table 2.5.2. The recommended bolting is in accordance with ASTM A193-B7. Unless otherwise specified the flanges are protected by hot dipped galvanising. Additional organic coatings such as polyamide epoxy are available on request.

Dimensions

Dimensions are based on EEMUA -145, Section 2A and 2B, Tables 2.2 and 2.3.

Tolerances

The tolerances are based on EEMUA - 145, Section 2A and 2B, Tables 2.4.1 and 2.4.2.

Solid Weld Neck Flanges

Type and Construction

The solid weld neck flanges are in accordance with EEMUA 145, Section 3 for 16 and 20 bar systems. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 36 in./914 mm Class 150. Other sizes are available on request. Drilling and outside diameter dimensions of flange sizes $\frac{1}{2}$ in./16 mm-24 in./610 mm are in accordance with ANSI B16.5 and BS 1560, whereas the larger sizes, 28 in./711 mm -36 in./914 mm are in accordance with MSS SP-44. The recommended bolting is in accordance with ASTM B150 alloy UNS C63000.

Dimensions

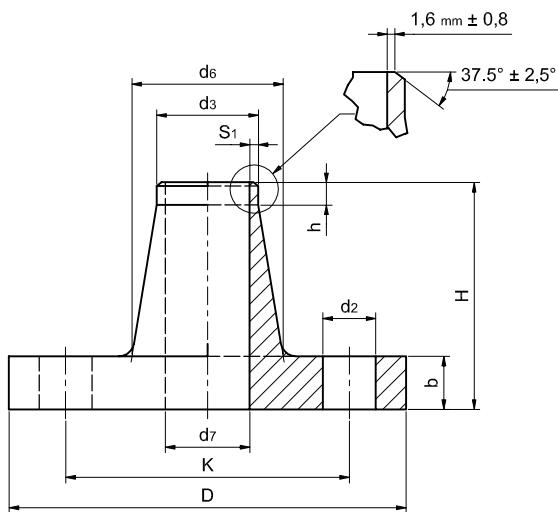

Dimensions are based on EEMUA -145, Section 3, Table 3.2-3.3.

Tolerances

The tolerances are based on EEMUA – 145, Section 3, Table 3.4.

| Nominal Size | | | | | | 16 bar | 20 bar | |

Solid Slip-On Flanges

Type and Construction

The solid slip-on flanges are in accordance with EEMUA 145, Section 4 and are suitable for both 16 and 20 bar systems. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 4 in./108 mm Class 150. Drilling and outside diameter dimensions are in accordance with ANSI B16.5 and BS 1560. The recommended bolting is in accordance with ASTM B150 alloy UNS C63000.

Dimensions

Dimensions are based on EEMUA -145, Section 4, Table 4.2.

Tolerances

The tolerances are based on EEMUA - 145, Section 4, Table 4.3.

| Nominal Size in | Nominal Size mm | Flange Diameter D mm | Flange Thickness d_3 mm | Flange Thickness b mm | Flange Height H mm | No. of Bolt Holes d_6 mm | Diameter of Bolt Holes d_2 mm | Approx. Weight kg |

| 3 88.9 | | 190 | 89.18 | 27 | 34 | 105 | 19.0 | 5.2 |
| 4 108 | | 229 | 108.38 | 27 | 40 | 135 | 19.0 | 7.7 |

Composite Blind Flanges

Type and Construction

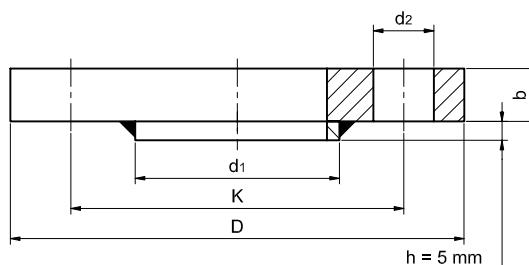

The composite blind flanges are in accordance with manufacturer's specification. The range of sizes covered is $\frac{1}{2}$ in./16 mm to 36 in./914 mm Class 150. Drilling and outside diameter dimensions of flange sizes $\frac{1}{2}$ in./16 mm-24 in./610 mm are in accordance with ANSI B16.5 and BS 1560, whereas the larger sizes, 28 in./711 mm -36 in./914 mm are in accordance with MSS SP-44. The blind flanges are suitable for use both 16 and 20 bar systems.

The composite blind flanges are manufactured from forged carbon steel in accordance with ASTM A105 cladded with copper nickel disk. In contrast to raised face blind flanges in accordance to ANSI B16.5, the supplied composite flanges are considered as flat face, since the diameter of the copper nickel disk d_1 is equivalent to the flange diameter d_4 weld neck stub end in accordance with EEMUA 145, Section 1A. By these means, uniform contact over the weld neck stub end faces is ensured. The recommended bolting is in accordance with ASTM A193-B7.

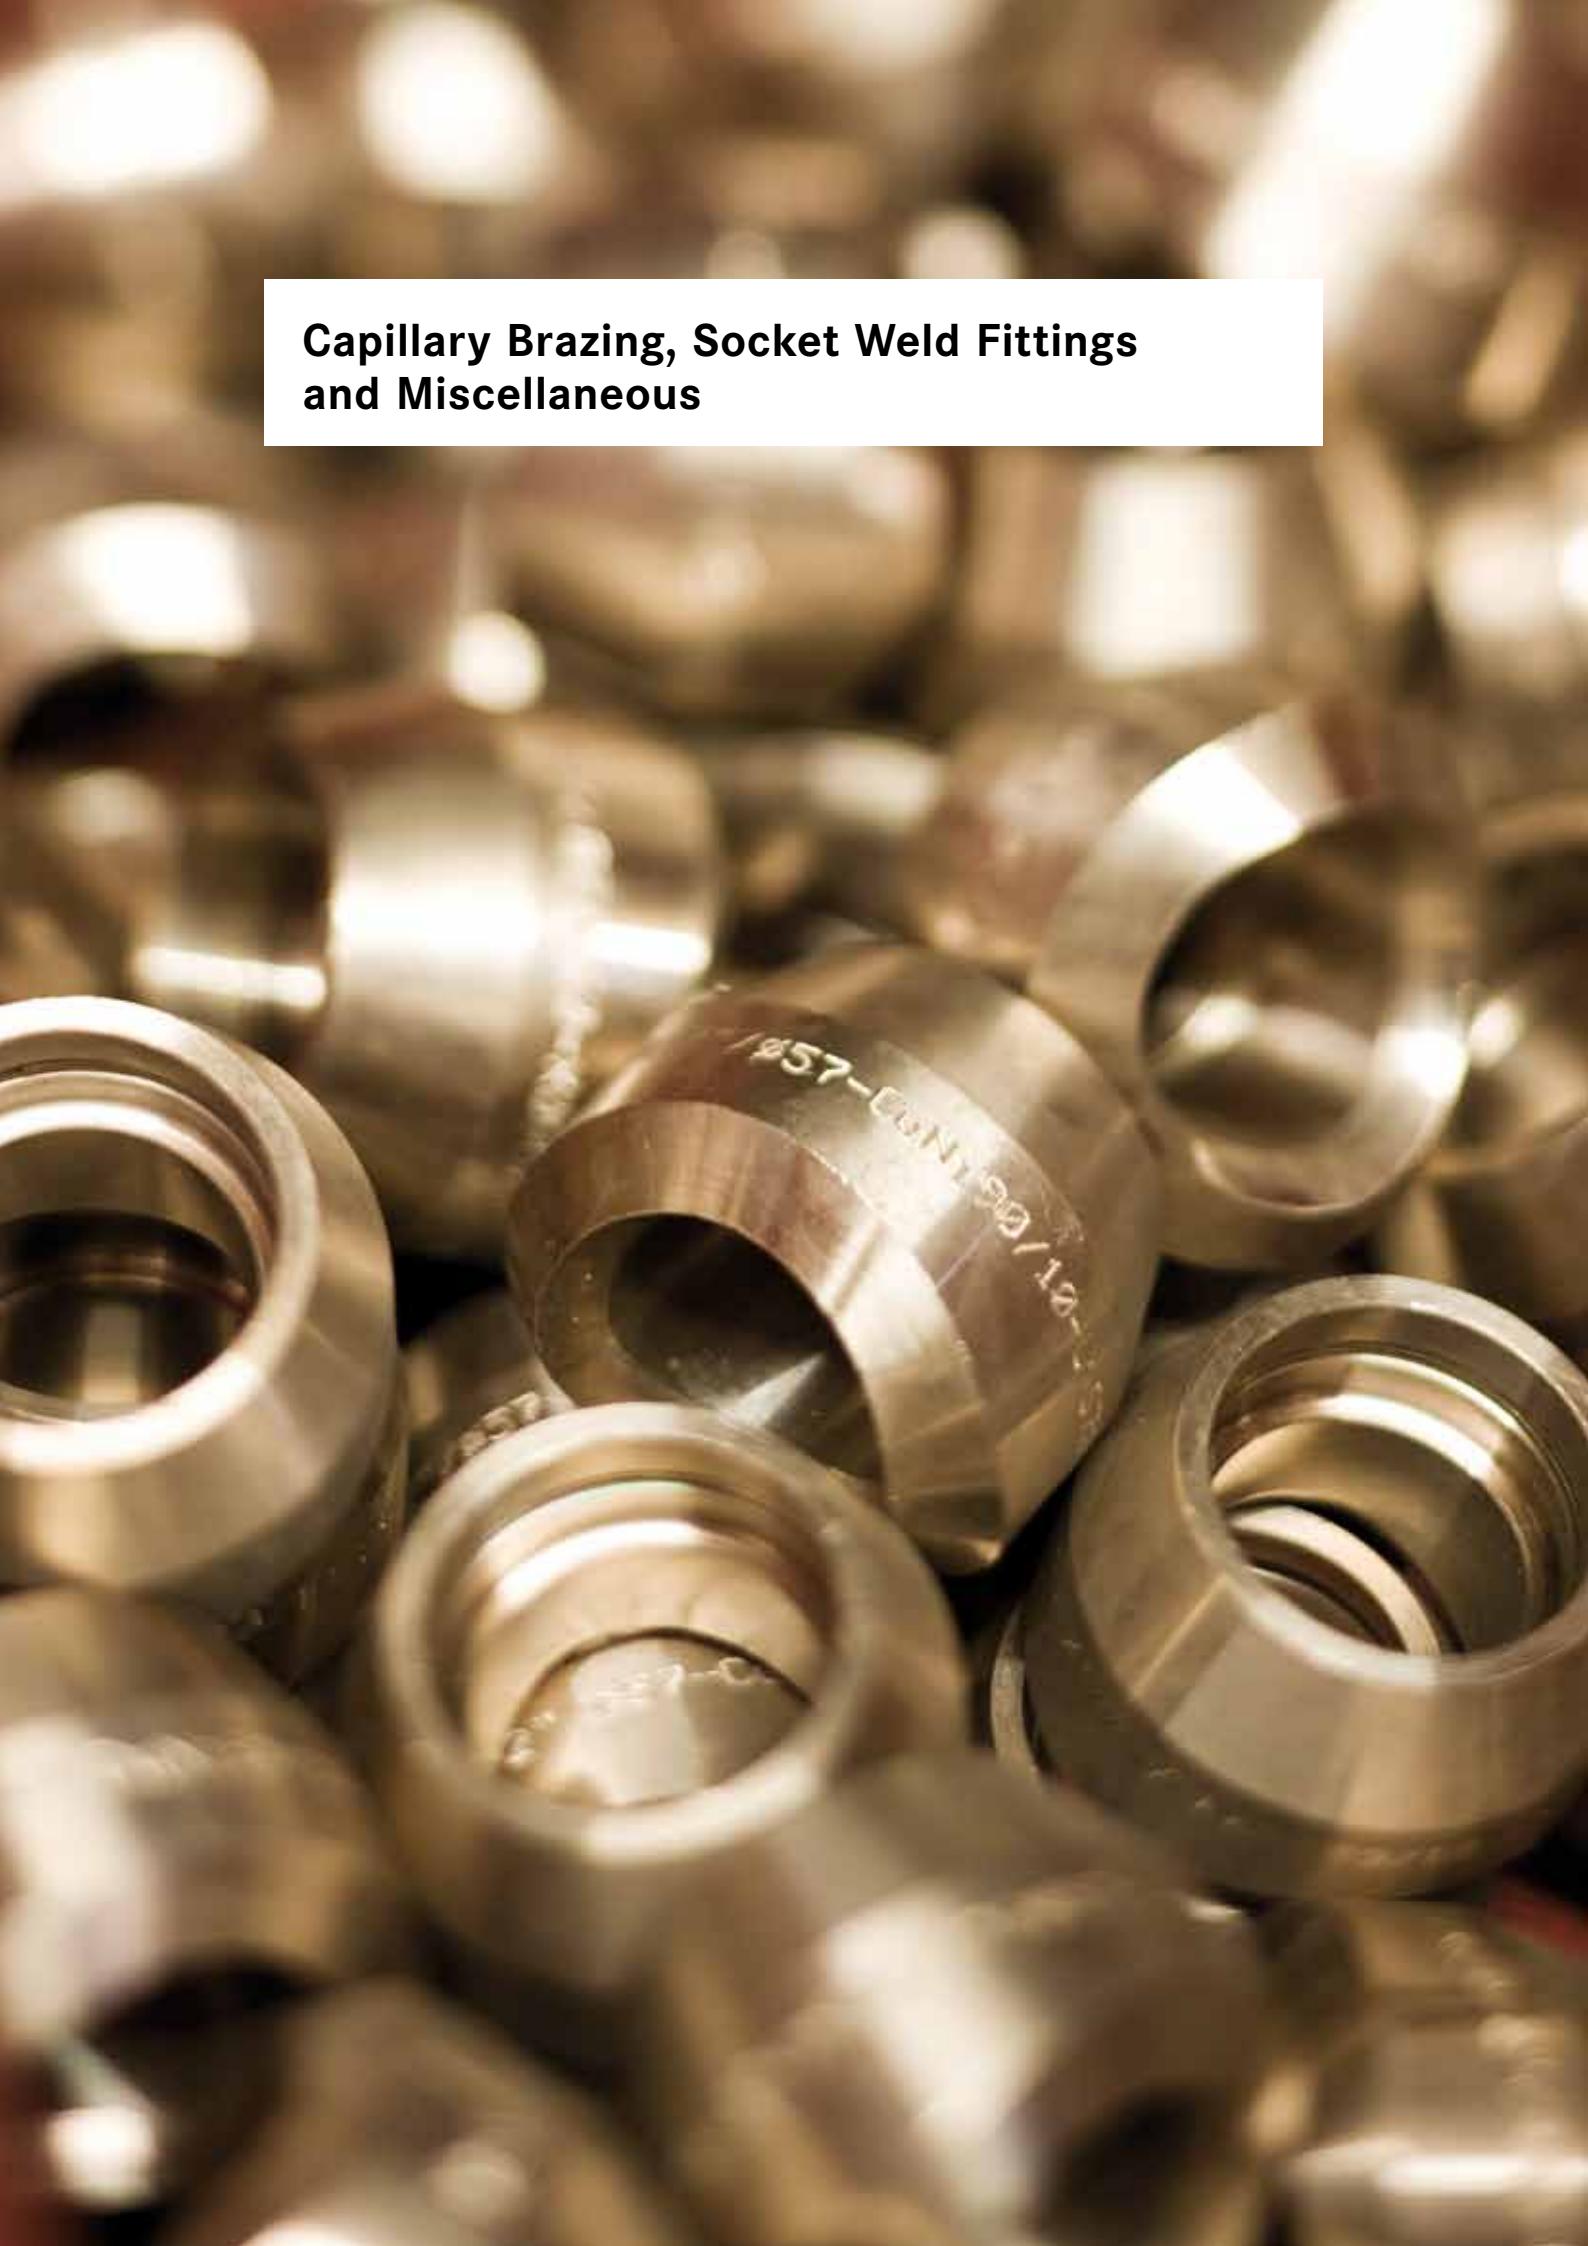

Unless otherwise specified the flanges are protected by hot dipped galvanising. Additional organic coatings such as polyamide epoxy are available on request. Solid blind flanges are available on request.

Tolerances

Tolerances are equivalent to the dimensions for weld neck backing flanges based on EEMUA - 145, Section 1B, Table 1.5.2.

| Nom. Size in | Spec. Size mm | Flange Diameter D mm | K mm | Diameter of Bolt Holes d_2 in | Flange Thickness b min mm | Diameter of Disk d_1 mm | No. of Bolt Holes | Approx. Total Weight (kg) |

Material

OSNA®-10 - CuNi 90/10

Appendix A

Pressure/temperature ratings of flanges

| Type of Flange | Size Range | Maximum Allowable Working Pressure-bar | | | | | | | |
|--|--------------------------------|--|------|------|-------|---------------|------|------|-------|
| | | 16 bar system | | | | 20 bar system | | | |
| | | 38°C | 50°C | 75°C | 100°C | 38°C | 50°C | 75°C | 100°C |
| Composite weld neck (section 1) | ½ in/16 mm to 4 in/108 mm | see 20 bar system | | | | 20 | 19.7 | 18.6 | 17.3 |
| | 6 in/159 mm to 36 in/914 mm | 16.0 | 16.0 | 16.0 | 15.7 | 20 | 19.7 | 18.6 | 17.3 |
| Composite slip-on (section 2) | ½ in/16 mm to 4 in/108 mm | see 20 bar system | | | | 20 | 19.7 | 18.6 | 17.3 |
| Solid weld neck (section 3) | ½ in/16 mm to 4 in/108 mm | see 20 bar system | | | | 20 | 19.7 | 18.6 | 17.3 |
| | 6 in/159 mm to 36 in/914 mm | 16.0 | 16.0 | 16.0 | 15.7 | 20 | 19.7 | 18.6 | 17.3 |
| Solid slip-on (section 4) | ½ in/16 mm to 4 in/108 mm | see 20 bar system | | | | 20 | 19.7 | 18.6 | 17.3 |

Surface finish of the copper-nickel stub end and flangejoint faces

| Method of machining | Ra* µm | | Rz* µm | |
|---------------------|--------|------|--------|------|
| | min. | max. | min. | max. |
| turning | 3.2 | 12.5 | 12.5 | 50 |

Note

The term "turning" includes any method of machining producing concentric or spiral grooves.

Pressure/temperature ratings - fittings

| Type of Fitting | Size Range | Maximum Allowable Working Pressure-bar | | | | | | | |
|----------------------------------|--------------------------------|--|------|------|-------|---------------|------|------|-------|
| | | 16 bar rating | | | | 20 bar rating | | | |
| | | 38°C | 50°C | 75°C | 100°C | 38°C | 50°C | 75°C | 100°C |
| Butt welding fittings | 1 in/30 mm to 4 in/108 mm | use 20 bar | | | | 20 | 19.7 | 18.6 | 17.3 |
| | 6 in/159 mm to 36 in/914 mm | 16.0 | 16.0 | 16.0 | 15.7 | 20 | 19.7 | 18.6 | 17.3 |
| Socket weld fittings | ½ in/16 mm to 2 in/57 mm | use 20 bar | | | | 20 | 19.7 | 18.6 | 17.3 |
| Capillary brazed fittings | ½ in/16 mm to 2 in/57 mm | | | | | 20 | 19.7 | 18.6 | 17.3 |

Mechanical Properties

| | Tensile Strength | | | | 0.2 % Proof Stress | | Elongation % min on L = 5.65 √S ₀ | Hardness HV5 |
|---|-------------------|------|--------|--------|--------------------|--------|--|-----------------|
| | N/mm ² | | PSI | | N/mm ² | PSI | | |
| | min. | max. | min. | max. | | | | |
| Seamless Pipes | 300 | 380 | 43.512 | 55.115 | 105 | 15.229 | 30 | |
| Seam-welded pipes | 280 | - | 40.611 | - | 105 | 15.229 | 30 | 120* |
| Weld neck and slip-on stub ends, solid weld neck and slip-on flanges | 280 | - | | | 105 | 15.229 | 30 | 120* |
| Fittings | 280 | - | 40.611 | | 105 | 15.229 | 30 | 120* |

* Determined on finished tube outside of heat affected zone

Appendix B

| Temperature Range | SI Units | US Costomary Units | 20°C | 68°C | 100°C | 212°C | 200°C | 392°C | 300°C | 572°C | 400°C | 752°F |
